DATE MAILED: 07/14/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

## Office Action Summary

Application N .

10/815,654

Applicant(s)

YAMAZAKI ET AL.

Examiner

Maria Guerrero

Art Unit

2822

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 01 May 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-84 is/are pending in the application.
- 4a) Of the above claim(s) See Continuation Sheet is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 28,32,36,40,44,48,52,56,61-63,66-72,74,76,78 and 80-84 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

### Attachment(s)

- ☐ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date \_\_\_\_\_.
- ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_\_.
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: \_\_\_\_\_.

Continuation of Disposition of Claims: Claims withdrawn from consideration are 1-27,29-31,37-39,41-43,49-51,53-55,57-61,64,65,73,75,77 and 79.

### **DETAILED ACTION**

1. This Office Action is in response to the Amendment filed May 1, 2006.

### **Status of Claims**

2. Claims 1-84 are pending.

### ***Election/Restrictions***

3. Applicant's election of Species 1D (independent claims 44, 48, 52, 56 and their dependent claims) in the reply filed on December 29, 2005 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). However, applicant pointed out claims 27-42 and 72-79 as generic claims. Claims 28, 32, 36, 40, 72, 76 and 78 have been examined with the elected species the rest of the claims recited some embodiments that do not correspond with the elected species i.e., a silicon oxide film covering the thin film transistor.

4. Claims 1-27, 29-31, 37-39, 41-43, 49-51, 53-55, 57-61, 64-65, 73, 75, 77 and 79 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on December 29, 2005.

### ***Information Disclosure Statement***

5. The information disclosure statement filed May 1, 2006 has been considered.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 28, 32, 36, 48, 52, 61-62, 66-72, 76, 78, 80, 83-84 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wakai et al. (U.S. 5,032,883) in view Takenouchi et al. (U.S. 5,427,961).

Wakai et al. discloses an inverted staggered TFT having a pixel electrode, an insulating substrate (filmy) 101, a gate insulating film 103, and a semiconductor film 104 (amorphous silicon or the like) (col. 4, lines 15-30, col. 5, lines 40-45). Wakai et al. teaches an insulating film 108 comprising polyimide, silicon oxide or an acrylic resin over a the thin film transistor and therebetween the transistor and the substrate formed

Art Unit: 2822

by applying a liquid (col. 6, lines 2-15). Wakai et al. teaches the first insulating film 108a being used to flatten the uneven surface above the insulating substrate (fig. 7, col. 7, lines 48-57). Wakai et al. shows the thin film transistor comprising a coplanar thin film transistor as well known in the art (col. 1, lines 35-40). Wakai et al. discloses the card-type electronic device having a pair of filmy substrates opposing to each other and a thin film transistor therebetween (Fig. 5-6, col. 6, lines 35-67).

Wakai et al. does not specifically show the substrate being a flexible substrate and forming a resinous layer over the first flexible substrate. However, Takenouchi et al. discloses a semiconductor device having a resinous substrate, the resinous substrate made of polyester (e.g., PET (polyethylene terephthalate)), polyimide, fluoroplastic, PES (polyethylene sulfone) (col. 3, lines 49-55). Takenouchi et al. also teaches a resinous layer provided on the resinous substrate including an acrylic resin (e.g. methyl acrylate ester, ethyl acrylate ester, butyl acrylate ester, and 2-ethylhexyl acrylate ester (col. 3, lines 55-60). In addition, Takenouchi et al. discloses providing the film on the substrate with the purpose of leveling the initial surface irregularities (col. 4, lines 10-15).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Wakai et al. reference by including the resinous substrate taught by Takenouchi et al. in order to reduce the cost and to obtain a device easily handled having a larger field of application (Takenouchi et al., col. 1, lines 15-25, col. 3, lines 20-25).

Art Unit: 2822

7. Claims 40, 56, 63, 66-71, 74, 80-82 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wakai et al. (U.S. 5,032,883) in view of view of Kaschmitter et al. (U.S. 5,456,763) and Takenouchi et al. (U.S. 5,427,961).

Wakai et al. discloses an inverted staggered TFT having a pixel electrode, an insulating substrate (filmy) 101, a gate insulating film 103, and a semiconductor film 104 (amorphous silicon or the like) (col. 4, lines 15-30, col. 5, lines 40-45). Wakai et al. teaches an insulating film 108 comprising polyimide, silicon oxide or an acrylic resin over a the thin film transistor and therebetween the transistor and the substrate formed by applying a liquid (col. 6, lines 2-15). Wakai et al. teaches the first insulating film 108a being used to flatten the uneven surface above the insulating substrate (fig. 7, col. 7, lines 48-57). Wakai et al. shows the thin film transistor comprising a coplanar thin film transistor as well known in the art (col. 1, lines 35-40). Wakai et al. discloses the card-type electronic device having a pair of filmy substrates opposing to each other and a thin film transistor therebetween (Fig. 5-6, col. 6, lines 35-67).

Wakai et al. does not specifically show the substrate being a flexible substrate, forming the crystalline silicon by laser irradiation (KrF or XeCl laser light) to the amorphous silicon layer as claimed. However, Kaschmitter et al. shows converting amorphous silicon crystalline silicon by applying laser irradiation using KrF or XeCl excimer laser light (col. 4, lines 1-65, col. 5, lines 35-57). Kaschmitter et al. teaches employing inexpensive plastic substrates such as PES and the temperature up to 200°C. (col. 4, lines 32-50).

Wakai et al. does not specifically show forming the resinous layer over the first flexible substrate. However, Takenouchi et al. discloses a semiconductor device having a resinous substrate, the resinous substrate made of polyester (e.g., PET (polyethylene terephthalate)), polyimide, fluoroplastic, PES (polyethylene sulfone) (col. 3, lines 49-55). Takenouchi et al. also teaches a resinous layer provided on the resinous substrate including an acrylic resin (e.g. methyl acrylate ester, ethyl acrylate ester, butyl acrylate ester, and 2-ethylhexyl acrylate ester (col. 3, lines 55-60). In addition, Takenouchi et al. discloses providing the film on the substrate with the purpose of leveling the initial surface irregularities (col. 4, lines 10-15).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Wakai et al. reference by including the flexible substrate, the crystallization process suggested by Kaschmitter et al. and the resinous layer suggested by Takenouchi et al. in order to obtain thin film transistors with low cost and light weight conformal display materials (Kaschmitter et al., col. 5, lines 50-57).

Regarding the process limitations, the patentability of a product does not depend on its method of production. If the product in the product-by process claim is the same as or obvious from a product of the prior art, the claim is unpatentable even though the prior art product was made by a different process. In re Hirao and Sato et al., 190 USPQ 15 at 17 (CCPA 1976 (footnote 3). See also In re Brown and Saffer, 173 USPQ 685 (CCPA 1972); In re Luck and Gainer, 177 USPQ 523 (CCPA 1973); In re Fessmann, 180 USPQ 324 (CCPA 1974); In re Marosi et al., 218 USPQ 289 (Fed. Cir. 1983); In re Thorpe, 777 F.2d 695, 698, 227 USPQ 964, 966 (Fed. Cir. 1985).

8. Claims 44, 48, 52, 61-62, 66-69, 76, 78, 80 and 83-84 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tamahiko Nishiki et al. (JP 63-279228) (cited by Applicant) in view of Takenouchi et al. (U.S. 5,427,961).

Tamahiko Nishiki et al. discloses a semiconductor device comprising a first substrate, a TFT having pixel electrodes with source and drain regions, a second substrate, a gate insulating film, and a semiconductor film (amorphous silicon (including microcrystalline silicon)) (Fig. 1(A)-6). Tamahiko Nishiki et al. teaches an insulating film (polyimide) having a flat surface provided on the first substrate to planarize the surface (Fig. 1(A)-6, pages 8-15).

Tamahiko Nishiki et al. fails to disclose the substrate being a resinous substrate such as polyethylene terephthalate, polyethylene naphthalate, polyethylene sulfite and polyimide as claimed. Tamahiko Nishiki et al. fails to show the resinous material consisting of: methyl ester of acrylic acid, ethyl ester of acrylic acid, butyl ester of acrylic acid and 2-ethylhexyl ester of acrylic acid as claimed. However, this is known in the art as evidenced Takenouchi et al.

Takenouchi et al. discloses a semiconductor device having a resinous substrate, the resinous substrate made of polyester (e.g., PET (polyethylene terephthalate)), polyimide, fluoroplastic, PES (polyethylene sulfone) (col. 3, lines 49-55). Takenouchi et al. also teaches a resinous layer provided on the resinous substrate including an acrylic resin (e.g. methyl acrylate ester, ethyl acrylate ester, butyl acrylate ester, and 2-ethylhexyl acrylate ester (col. 3, lines 55-60). In addition, Takenouchi et al. discloses

Art Unit: 2822

providing the film on the substrate with the purpose of leveling the initial surface irregularities (col. 4, lines 10-15).

Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Tamahiko Nishiki et al. reference by including the resinous substrate taught by Takenouchi et al. in order to reduce cost and to obtain a device easily handled having a larger field of application (Takenouchi et al., col. 1, lines 15-25, col. 3, lines 20-25).

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

9. Claims 28, 32, 36, 44, 48, 52, 61-62, 72 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-3, 6-9, 12-13, 15-16, 18-19, 21-26, 29-43 of U.S. Patent No. 6,242,758 in view of Mizushima et al. (US 5,066,110) (of record). Claims 1-3, 6-9, 12-13, 15-16, 18-19, 21-26 and 29-43 recite the embodiments as claimed except for the pair of substrates opposing

to each other. However, Mizushima et al. is presented as evidence to show that would have obvious to a person of ordinary skill to include the pair of substrate in the claims because this is a conventional embodiment on a liquid crystal display device (Mizushima et al., Fig. 2, 5, 7, col. 14, lines 25-65).

10. Claims 28, 32, 36, 44, 48, 52, 61-62, 66-72, 76, 78 and 80 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 44, 48, 52, 56 and 59-67 of copending Application No. 10/815,653. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 44, 48, 52, 56 and 59-67 of copending Application No. 10/815,653 anticipated the claims.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

### ***Response to Arguments***

11. Applicant's arguments filed May 1, 2006 have been fully considered but they are not persuasive. Claims 28,32,36,40,44,48,52,56,61,63,66-72,74,76,78 and 80-84 stand rejected. The amendment does not overcome the rejection because a person of ordinary skill in the art would recognize that the combination of the applied references would provide a device being flexible because Takenouchi et al. suggested that the device used a substrate having flexibility (col.1, lines 5-10).

12. In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by

combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Takenouchi et al. suggest that employing the flexible substrate instead of glass would reduce the cost and to obtain a device easily handled having a larger field of application (Takenouchi et al., col. 1, lines 15-25, col. 3, lines 20-25).

13. In response to applicant's argument that Takenouchi et al. disclose forming solar cells, the test for obviousness is not whether the features of a secondary reference may be bodily incorporated into the structure of the primary reference; nor is it that the claimed invention must be expressly suggested in any one or all of the references. Rather, the test is what the combined teachings of the references would have suggested to those of ordinary skill in the art. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981).

14. Furthermore, during patent examination, the pending claims must be "given \*>their< broadest reasonable interpretation consistent with the specification." > In re Hyatt, 211 F.3d 1367, 1372, 54 USPQ2d 1664, 1667 (Fed. Cir. 2000). While the claims of issued patents are interpreted in light of the specification, prosecution history, prior art and other claims, this is not the mode of claim interpretation to be applied during examination. During examination, the claims must be interpreted as broadly as their terms reasonably allow. > In re American Academy of Science Tech Center, F.3d, 2004

Art Unit: 2822

WL 1067528 (Fed. Cir. May 13, 2004)(The USPTO uses a different standard for construing claims than that used by district courts; during examination the USPTO must give claims their broadest reasonable interpretation.) < This means that the words of the claim must be given their plain meaning unless applicant has provided a clear definition in the specification. In re Zletz, 893 F.2d 319, 321, 13 USPQ2d 1320, 1322 (Fed. Cir. 1989) >; Chef America, Inc. v. Lamb-Weston, Inc., 358 F.3d 1371, 1372, 69 USPQ2d 1857 (Fed. Cir. 2004). Therefore, the words in the claims have been given their plain meaning.

15. Furthermore, "The use of patents as references is not limited to what the patentees describe as their own inventions or to the problems with which they are concerned. They are part of the literature of the art, relevant for all they contain." In re Heck, 699 F.2d 1331, 1332-33, 216 USPQ 1038, 1039 (Fed. Cir. 1983) (quoting In re Lemelson, 397 F.2d 1006, 1009, 158 USPQ 275, 277 (CCPA 1968)). A reference may be relied upon for all that it would have reasonably suggested to one having ordinary skill the art, including nonpreferred embodiments. Merck & Co. v. Biocraft Laboratories, 874 F.2d 804, 10 USPQ2d 1843 (Fed. Cir.), cert. denied, 493 U.S. 975 (1989). See also Celeritas Technologies Ltd. v. Rockwell International Corp., 150 F.3d 1354, 1361, 47 USPQ2d 1516, 1522-23 (Fed. Cir.1998).

16. Finally, the transitional term "comprising", which is synonymous with "including," "containing," or "characterized by," is inclusive or open-ended and does not exclude additional, unrecited elements or method steps. See, e.g., > Invitrogen Corp. v. Biocrest Mfg., L.P., 327 F.3d 1364, 1368, 66 USPQ2d 1631, 1634 (Fed. Cir. 2003) ("The

transition comprising' in a method claim indicates that the claim is open-ended and allows for additional steps."); < Genentech, Inc. v. Chiron Corp., 112 F.3d 495, 501, 42 USPQ2d 1608, 1613 (Fed. Cir. 1997) ("Comprising" is a term of art used in claim language which means that the named elements are essential, but other elements may be added and still form a construct within the scope of the claim.); Moleculon Research Corp. v. CBS, Inc., 793 F.2d 1261, 229 USPQ 805 (Fed. Cir. 1986); In re Baxter, 656 F.2d 679, 686, 210 USPQ 795, 803 (CCPA 1981); Ex parte Davis, 80 USPQ 448, 450 (Bd. App. 1948) ("comprising" leaves "the claim open for the inclusion of unspecified ingredients even in major amounts").

### ***Conclusion***

17. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
